

DARK GIANT HORSE FLY

DIPTERA: TABANIDAE
Tabanus sudeticus

Did you know? The Dark Giant Horse Fly have dark, uniform, brown eyes!

Did you know? They usually only suck blood from cows and horses, avoiding humans!

Did you know? The length of the specimen ranges from 20 to 25 mm where the flight tone results from the flapping of its wings that cause this insect to have a rather prominent buzzing noise!

Look and see!

Here is a female's dark, uniform, brown eyes!

Look at how symmetric the colors of the abdomen are!
